

Morphology in NLP

T Jyothi Reddy (192472079)

What is Morphology?

- Study of word formation and structure
- Smallest meaning unit: Morpheme
- Helps computers understand word meaning and grammar

Example:

Unhappiness = un + happy + ness

Types of Morphology

Inflectional Morphology

- Changes grammatical form
- play → played, cat → cats

Derivational Morphology

- Creates new words
- teach → teacher, happy → happiness

Applications in NLP

- Stemming & Lemmatization
- Machine Translation
- Information Retrieval
- Spell Checking
- Text Classification
- Speech Recognition

Conclusion

Key Takeaways

- Morphology improves language understanding.
- Identifies roots, prefixes, and suffixes.
- Essential for modern NLP systems.

Thank You!
